DETAILED ACTION

Election/Restrictions

1. Prior to setting forth the restriction requirement, it is noted that the claims recite improper Markush Groups. M.P.E.P. 803.02 states that "Since the decisions in *In re Weber*, 580 F.2d 455, 198 USPQ 328 (CCPA 1978); and *In re Haas*, 580 F.2d 461, 198 USPQ 334 (CCPA 1978), it is improper for the Office to refuse to examine that which applicants regard as their invention, *unless the subject matter in a claim lacks unity of invention* [emphasis added], *In re Harnish*, 631, F.2d 716, 206 USPQ 300 (CCPA 1980); and *Ex parte Hozumi*, 3 USPQ 2d 1059 (Bd. Pat. App. & Int. 1984). Broadly, unity of invention exists where compounds included within a Markush group (1) share a common utility and (2) share a substantial structural feature disclosed as being essential to that utility." In the instant case, the products rely upon oligonucleotides, which differ in structure to such an extent that would require non-coextensive searches to such an extent that they are considered to lack a substantial structural feature disclosed as being essential to the disclosed utility.

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Art Unit: 1623

Groups 1-110, claim(s) 26-48, drawn to a synthetic oligonucleotide of at least 26 nucleotides in length comprising a 5mCpG dinucleotide and a nucleotide sequence selected from the group consisting of TGACGTCA and SEQ ID NOS: 1-4 and 6-110.

The inventions listed as Groups 1-110 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Section (f)(i)(B)(1) of Annex B of the Administrative Instruction requires that all alternatives of a Markush Group have a common structure. Although the chemical compounds of Claims 26-48 share a common property or activity, the compounds are not regarded as being of similar nature because all the alternatives do not share a common structure. Specifically, the nucleotide sequences referred to in the Markush group are distinct. The examination of all groups would require different searches of the relevant U.S. Patents and the scientific literature, and would require the consideration of independent and distinct patentability issues. It would indeed impose an undue burden upon the examiner in charge of this application if the instant restriction requirement were not advanced as set forth herein.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1623

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
